Proceedings of the 4th Croatian Conference on Earthquake Engineering – 4CroCEE
22–25 March 2027, Opatija, Croatia
Copyright © 2027 CroCEE

TITLE OF THE EXTENDED ABSTRACT (PRINTED IN CAPITALS AUTOMATICALLY, MAX. TWO LINES)

First Author [1], Second Author [2], … (first and last name of each author, separated by commas)

[1] *Position, affiliation, e-mail address*
[2] *Position, affiliation, e-mail address*

Keywords: keywords1, keywords2, etc. Authors should suggest about 4–8 keywords for indexing purposes (separated by commas). Keywords are typeset automatically in italics, 10 pt, by the `\keywords` *command.*

This document explains and illustrates how to prepare an extended abstract for the 4th Croatian Conference on Earthquake Engineering – 4CroCEE 2027 using the LaTeX template. **Extended abstract can only be submitted for the Engineering Seismology session and the PhD session.**

Extended abstracts should not exceed **2 pages in length** with 500 to 1000 words. They may include figures, tables, endnotes, acknowledgements, and references. Manuscripts must be written in English. Authors using LaTeX must submit the complete source files **(.tex, .bib and figure files)** together with the compiled PDF, and should ensure that the formatting complies with the guidelines below before submission. The class option `extended` in the `\documentclass` command removes the Abstract section and makes the compiler warn if the document exceeds two pages.

1. General Appearance

The page layout, the 11 pt Palatino font, the line spacing (exactly 1.26 times the font size), the single-column text and the 1 cm indentation of the second and the following paragraphs are set by the class file `CroCEE.cls`. Do not change the margins, font sizes or spacing, and do not modify the class file.

Section headings (`\section`, bold 13 pt; `\subsection`, bold 11 pt) and the numbering of tables, figures and equations are generated automatically; refer to them with `\tabref`, `\figref` and `\Eqref`. Page numbers are added by the editors.

1.1. Tables, figures and equations

Tables are referred to in the text as Table 1 and must be included as part of the text, as shown below. The caption of each table is placed above the table, centred, in 10 pt font; table content is set in 10 pt font (not smaller than 8 pt). Tables span the full text width and use the `booktabs` rules, without vertical lines or shading.

Table 1. Dynamic properties of model.

Mode	T (s)	Mx	My	MRz
1	0.116	0	0.833	0
2	0.087	0.755	0	0.076
3	0.062	0.076	0	0.755

Copyright © 2027 CroCEE

Figures are referred to in the text as Fig. 1. Colour figures can be used, with a minimum resolution of 300 dpi. The caption is placed below the figure.

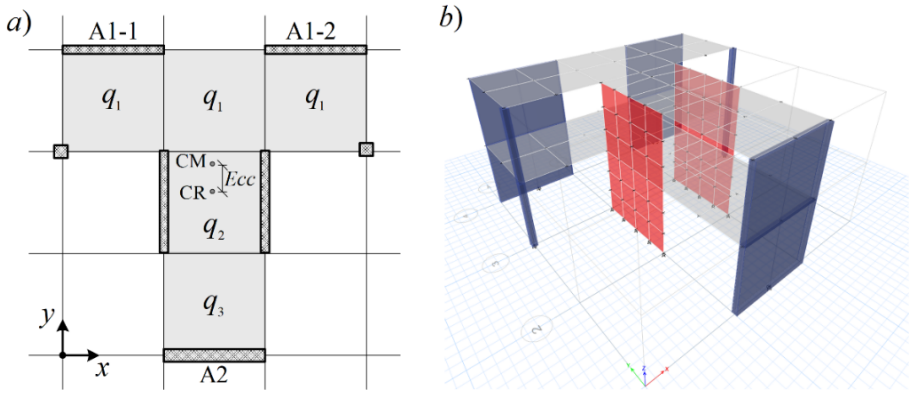

Figure 1. a) Building plan; b) Numerical model.

Symbols denoting vectors and matrices are set in bold with `\vect` and `\matr`; scalar variables are italic. Equations are centred, numbered automatically and referred to as Eq. (1):

$$a^2 + b^2 = c^2 \tag{1}$$

Acknowledgements

Acknowledgements provide an opportunity to express appreciation to those who contributed significantly to the preparation of the paper. They may be written in free style and must be brief.

References

References are cited in the text using square brackets [1,2], numbered in the order of appearance, and listed at the end in the *Elsevier (numeric, with titles)* style, generated by BibTeX from `Bibliography/References.bib`; see `CroCEE_FullPaper.tex` for details.
